

Undergraduate Research

At UC Denver, undergraduates are **building** robots, **creating** documentary films, **investigating** cultural trends, **developing** new imagining techniques to detect cancer. These students are engaged in the heart of the University's intellectual community, where they discover the exciting process of creating new knowledge and artistic expression. Opportunities for discovery exist in campus laboratories, studios, and beyond.

The Experiential Learning Center maintains this website to provide information about undergraduate research opportunities both on and off campus. Also check out the UROP webpage to apply for funding for your research project. In April of each year, we co-sponsor the campus-wide celebration of scholarly work, the **Research and Creative Activities Symposium**.
